Elimination of Commodity Detail on Imports Valued
From \$100 to \$199

When the introduction of the new Import Commodity Classification was planned, it was anticipated that import reports for the first six months of the changeover year would be published increasingly late, and that these publication delays would be gradually reduced over the following twelve months. Normal timeliness was expected to be restored by the middle of the second year that the new classification was in use.

These plans were seriously dislocated by the unexpectedly large increase in the volume of import entries received in 1964, and by a shortage of trained clerical staff. By September (the end of June coding) the backlog of unprocessed import documents was almost 50% greater than anticipated, and it was clear that without a drastic change in processing standards the backlog would continue to increase for several months.

It was therefore decided to suspend the coding by commodity of all entries individually valued between \$100 and \$199, and also to suspend the coding by commodity of components valued at less than \$100 included on entries totalling \$200 or more in value. Values between \$100 and \$199 (and components of larger entries valued between \$50 and \$99) accounted for some 26% of the volume of commodity transactions. This change in coding rules was expected to eliminate about three-quarters of these transactions from commodity totals, and thus increase document processing speed by about 15%. The expected gain has been achieved, and December 1964 statistics should appear only about two weeks later than provided in the original schedule.

This change had little effect either on the grand total of all imports or on country totals. The "small value" transactions which would previously have been classified by country and commodity are still classified by country. A few transactions which would, because of their commodity code, have been included in the "non-trade" groups (990- and 995-) will now be included in class 970-75 and therefore in country totals and grand totals, but this should not increase these totals by as much as 0.05%. This is much less than the normal margin of error in import totals.

It is not possible to state the effects of this change on class totals with equal certainty. The introduction of the new Import Commodity Classification in January 1964 largely invalidates earlier studies of the importance of small value shipments in individual commodity classes. New studies were made of small value shipments in April and May, 1964, but because many imported commodities have a strong seasonal pattern these studies do not provide an entirely adequate basis for analysis. The importance of this limitation is increased by the fact that small value shipments in any class tend to form a greater proportion of the class total in months when trade in the class is small than in months when trade in the class is large. The distortion arising from this limitation has been partially offset by modifying the April-May estimates on the basis of a study of the small value elements remaining in statistics for July 1964. It remains true, however, that some classes have probably been damaged to a greater extent than indicated by these studies, others to a lesser extent, and precise estimates of the effect on individual classes can not be made. It may be possible to provide a better analysis if a return to a lower coding limit becomes feasible in the future.

The limited information available suggests that about 127 individual commodity classes will each lose more than 10% of their previous content, and that 10 of these classes will lose more than 25% of their content. About 1.6% of the total value of all imports will be added to class 970-75, which will now include some 3% of all commodity imports (about \$220 - \$250 million in a full year). Of the 344 groups in the new classification about 36 will be reduced by 5% or more. The reduction in section totals is less, but ranges as high as some 1.7% in the case of end products. The total for Section VI, Special Transactions, Trade, will be inflated by more than 80% through the inclusion of small-value elements excluded from other sections.

The classes in Section V, End Products, Inedible, are affected more by the elimination of \$100 - \$199 shipments than are those in other sections of the classification. It is estimated that 24 of the groups in this section will be reduced by 5% or more, and that 88 of the classes will be reduced by 10% or more. Six of the classes which will be reduced by more than 25% are located

in this section. The effect on the classes of the foodstuffs section (especially fresh fruits and vegetables) may be greatly underestimated because of the limited scope of the studies on which estimates must be based, and these estimates are especially subject to error.

There is little evidence to suggest that there will be a significant difference in the way that this change in procedures affects statistics of commodity imports from individual countries. The only two of our principal trading partners with an above-average proportion of small value shipments are the United States and Austria. For these countries the additional value transferred to class 970-75 is expected to be about 2.0% and 2.2%, respectively, of total imports from these countries. This is only slightly higher than the all countries average of 1.6%.

It should be borne in mind that the effects of the elimination of commodity detail for entries valued between \$100 and \$199 are in addition to the effects of the elimination of detail on entries valued between \$50 and \$99 in April, 1962. No studies have been made of the cumulative effect of these increases in the coding limit.

The following tables illustrate the estimated effects of the elimination of commodity detail for entries valued between \$100 and \$199. Table 1 shows, for each section of the classification, the percentage effect on total value, the number and percentage of groups in the section reduced by 5% or more, and the number and percentage of classes in the section reduced by 10% or more. Table 2 lists the commodity groups which the studies suggest will be reduced by 5% or more, and shows the estimated percentage by which each group will be reduced. Table 3 lists the commodity classes which the studies suggest will be reduced by 10% or more, and also indicates the 10 classes likely to be reduced by 25% or more. The data available provide an inadequate basis for more precise estimates of percentage effects on individual classes.

Table 1. SUMMARY OF EFFECTS OF ELIMINATION OF COMMODITY DETAIL FOR IMPORT ENTRIES VALUED BETWEEN \$100 and \$199.

Section	Effect On Section Value %	Groups in Section Reduced 5% & More		Classes in Section Reduced 10% & More	
		No.	%	No.	%

EXPLANATORY NOTES

1. **Source of Data:** Import statistics are compiled from information appearing on customs import entries and invoices, except for data on electricity. Electricity imports are reported directly by the importing firms to the Dominion Bureau of Statistics.
2. **Time Periods:** Import statistics for any month include all goods declared on import entries received at DBS during the calendar month, and on electricity reports received within the following calendar month. Most import entries reach DBS within a few days of the date that goods enter Canada, and delays rarely exceed one week. Electricity imports are usually included in statistics for the month in which these imports actually occurred.
3. **Coverage:** From January 1, 1964, import statistics include all goods which are cleared by Customs immediately on arrival in Canada, plus goods which are entered into customs warehouses rather than being cleared on arrival. For 1963 and earlier years import statistics included goods cleared immediately on arrival plus goods cleared for consumption out of customs warehouses. The two types of record eventually cover the same totals, except for a small amount of goods which is entered into customs warehouse and then re-exported. There may, however, be an important difference in the time at which warehoused goods are recorded as imports; some shipments which enter customs warehouses remain there for several months before clearance. A more detailed discussion of this change appears on one of the blue pages included in the January, 1964 issue of this report.

Both in 1964 and in earlier years, import statistics exclude the following commodity movements (some of these are recorded separately as Special Transactions—Non-Trade in Table 5 of this report): gold and gold products where the value of the gold content is 80% or more of the total value (a small amount of gold scrap in the form of jewellers' sweepings is included in class 258-99); current coin; settlers' effects; private donations and gifts; tourists purchases exempt from duty; goods imported by foreign armed forces or diplomats stationed in Canada (or brought back by Canadian armed forces or diplomats returning from postings outside Canada); temporary imports for exhibition or competition (and film imported for exhibition or processing or returned after exhibition or processing abroad); ships of British construction and registry imported for use in Canada, and ships and aircraft purchased for use as international carriers but not used to carry goods between points in Canada; bunker supplies and ships' stores purchased by Canadian vessels or aircraft abroad; generally, all temporary imports and goods merely moving in transit through Canadian territory.

4. **Countries Credited:** Imports are credited to the country from which the goods were first directed to Canada, except for goods of Central or South American origin consigned to Canada from the United States which are credited to the country of origin.
5. **Quantities:** Tables 4 and 5 show quantities in terms of the units specified for each class in the Import Commodity Classification, Vol. I. Where no unit of quantity is specified, the quantity columns are empty.

Units of weight or volume relate to the weight or volume of the goods, and exclude the weight or volume of any packing required for shipment except in certain special cases otherwise defined in the Customs Tariff. Units of number refer to the number of complete (or substantially complete) units imported, excluding parts (for any class where the recorded value includes both complete units and parts of these units, the average value per complete unit can not be calculated). "Ton" means 2,000 pounds avoirdupois. "Cwt," means 100 pounds avoirdupois.

6. **Values:** The value of goods imported is usually the value as determined for customs duty. The Canadian Customs Act generally requires the valuation of goods f.o.b. point of shipment in the country of export, but at least in recent years importers have often reported c.i.f. value for free goods or goods subject to specific rates of duty. An effort is made to ensure that f.o.b. values are consistently used in import statistics in the following cases: goods subject to dumping duty (from January, 1959); raw cotton and crude petroleum (from January, 1962, retroactive to January, 1961); raw sugar (from January, 1963, retroactive to January, 1961); all shipments individually valued at \$100,000 or more (from January, 1964). Only about one-fifth of the value of imports is covered by these specific checks.
7. **Abbreviations:** Many descriptions of countries and commodities used in this report are abbreviated or incomplete because of mechanical limitations. A key to abbreviations of countries appears in this report, and full descriptions of all commodities appear in the Import Commodity Classification, Vol. I. The letters "n.e.s." mean "not elsewhere specified".
8. **Revisions:** All statistics in this report are subject to revision. Revisions to previous reports are published on coloured pages at the beginning of each monthly report.

KEY TO ABBREVIATIONS OF COUNTRIES

Note: The classification of Countries with a statement of the territorial limits used for statistical purposes will be found in the blue pages of the January, 1960 report. Amendments effective in any year are listed in the January report for that year.

Value, Price and Volume Indexes of Imports

The value, price and volume indexes of imports based on the nine main component material groups according to the old Statistical Classification—Imports are still carried in this report and will continue to be published throughout the current year for the convenience of the users of these data.

This report also marks the start of publication of the value, price and volume indexes of imports arranged according to the sections of the new Import Commodity Classification. The declared value indexes have been based on a grouping of 1948 values into appropriate sections of the new classification. The first six sections of this classification are represented in the index, and Section VII "Special Transactions Non-Trade", which does not enter into the import totals, is excluded. The price index has been based on a re-arrangement of the individual price lines used in calculating the old index, retaining, with some small changes, the original 1948 weighting pattern. The volume index is, as usual, derived by dividing the value index by the corresponding price index. No price or volume index can be compiled for Sections VI "Special Transactions—Trade" because of its non-homogeneity. In addition to presenting the January 1964 data, the re-arranged indexes have been also prepared for 1962 and 1963.

It should be noted that as of January, 1964, imports include both goods which are cleared by Customs immediately on arrival in Canada and also goods entered into customs warehouses without being cleared for domestic use. This new concept has also been introduced in the value, price and volume indexes but the effect on the indexes is considered of minor significance.

For an explanation of the new basis of compiling trade statistics, refer to the blue insert in the January, 1964, issue of this report.

EXPLANATORY NOTES

1. **Source of Data:** Import statistics are compiled from information appearing on customs import entries and invoices, except for data on electricity. Electricity imports are reported directly by the importing firms to the Dominion Bureau of Statistics.
2. **Time Periods:** Import statistics for any month include all goods declared on import entries received at DBS during the calendar month, and on electricity reports received within the following calendar month. Most import entries reach DBS within a few days of the date that goods enter Canada, and delays rarely exceed one week. Electricity imports are usually included in statistics for the month in which these imports actually occurred.
3. **Coverage:** From January 1, 1964, import statistics include all goods which are cleared by Customs immediately on arrival in Canada, plus goods which are entered into customs warehouses rather than being cleared on arrival. For 1963 and earlier years import statistics included goods cleared immediately on arrival plus goods cleared for consumption out of customs warehouses. The two types of record eventually cover the same totals, except for a small amount of goods which is entered into customs warehouse and then re-exported. There may, however, be an important difference in the time at which warehoused goods are recorded as imports; some shipments which enter customs warehouses remain there for several months before clearance. A more detailed discussion of this change appears on one of the blue pages included in the January, 1964 issue of this report.

Both in 1964 and in earlier years, import statistics exclude the following commodity movements (some of these are recorded separately as Special Transactions — Non-Trade in Table 5 of this report): gold and gold products where the value of the gold content is 80% or more of the total value (a small amount of gold scrap in the form of jewellers' sweepings is included in class 258-99); current coin; settlers' effects; private donations and gifts; tourists purchases exempt from duty; goods imported by foreign armed forces or diplomats stationed in Canada (or brought back by Canadian armed forces or diplomats returning from postings outside Canada); temporary imports for exhibition or competition (and film imported for exhibition or processing or returned after exhibition or processing abroad); ships of British construction and registry imported for use in Canada, and ships and aircraft purchased for use as international carriers but not used to carry goods between points in Canada; bunker supplies and ships' stores purchased by Canadian vessels or aircraft abroad; generally, all temporary imports and goods merely moving in transit through Canadian territory.

4. **Countries Credited:** Imports are credited to the country from which the goods were first directed to Canada, except for goods of Central or South American origin consigned to Canada from the United States which are credited to the country of origin.
5. **Quantities:** Tables 4 and 5 show quantities in terms of the units specified for each class in the Import Commodity Classification, Vol. I. Where no unit of quantity is specified, the quantity columns are empty.

Units of weight or volume relate to the weight or volume of the goods, and exclude the weight or volume of any packing required for shipment except in certain special cases otherwise defined in the Customs Tariff. Units of number refer to the number of complete (or substantially complete) units imported, excluding parts (for any class where the recorded value includes both complete units and parts of these units, the average value per complete unit can not be calculated). "Ton" means 2,000 pounds avoirdupois. "Cwt." means 100 pounds avoirdupois.

6. **Values:** The value of goods imported is usually the value as determined for customs duty. The Canadian Customs Act generally requires the valuation of goods f.o.b. point of shipment in the country of export, but at least in recent years importers have often reported c.i.f. value for free goods or goods subject to specific rates of duty. An effort is made to ensure that f.o.b. values are consistently used in import statistics in the following cases: goods subject to dumping duty (from January, 1959); raw cotton and crude petroleum (from January, 1962, retroactive to January, 1961); raw sugar (from January, 1963, retroactive to January, 1961); all shipments individually valued at \$100,000 or more (from January, 1964). Only about one-fifth of the value of imports is covered by these specific checks.
7. **Abbreviations:** Many descriptions of countries and commodities used in this report are abbreviated or incomplete because of mechanical limitations. A key to abbreviations of countries appears in this report, and full descriptions of all commodities appear in the Import Commodity Classification, Vol. I. The letters "n.e.s." mean "not elsewhere specified".
8. **Revisions:** All statistics in this report are subject to revision. Revisions to previous reports are published on coloured pages at the beginning of each monthly report.

KEY TO ABBREVIATIONS OF COUNTRIES

Note: The classification of Countries with a statement of the territorial limits used for statistical purposes will be found in the blue pages of the January, 1960 report. Amendments effective in any year are listed in the January report for that year.

Value, Price and Volume Indexes of Imports

The value, price and volume indexes of imports based on the nine main component material groups according to the old Statistical Classification—Imports are still carried in this report and will continue to be published throughout the current year for the convenience of the users of these data.

This report also marks the start of publication of the value, price and volume indexes of imports arranged according to the sections of the new Import Commodity Classification. The declared value indexes have been based on a grouping of 1948 values into appropriate sections of the new classification. The first six sections of this classification are represented in the index, and Section VII "Special Transactions Non-Trade", which does not enter into the import totals, is excluded. The price index has been based on a re-arrangement of the individual price lines used in calculating the old index, retaining, with some small changes, the original 1948 weighting pattern. The volume index is, as usual, derived by dividing the value index by the corresponding price index. No price or volume index can be compiled for Sections VI "Special Transactions—Trade" because of its non-homogeneity. In addition to presenting the January 1964 data, the re-arranged indexes have been also prepared for 1962 and 1963.

It should be noted that as of January, 1964, imports include both goods which are cleared by Customs immediately on arrival in Canada and also goods entered into customs warehouses without being cleared for domestic use. This new concept has also been introduced in the value, price and volume indexes but the effect on the indexes is considered of minor significance.

For an explanation of the new basis of compiling trade statistics, refer to the blue insert in the January, 1964, issue of this report.

EXPLANATORY NOTES

1. **Source of Data:** Import statistics are compiled from information appearing on customs import entries and invoices, except for data on electricity. Electricity imports are reported directly by the importing firms to the Dominion Bureau of Statistics.
2. **Time Periods:** Import statistics for any month include all goods declared on import entries received at DBS during the calendar month, and on electricity reports received within the following calendar month. Most import entries reach DBS within a few days of the date that goods enter Canada, and delays rarely exceed one week. Electricity imports are usually included in statistics for the month in which these imports actually occurred.
3. **Coverage:** From January 1, 1964, import statistics include all goods which are cleared by Customs immediately on arrival in Canada, plus goods which are entered into customs warehouses rather than being cleared on arrival. For 1963 and earlier years import statistics included goods cleared immediately on arrival plus goods cleared for consumption out of customs warehouses. The two types of record eventually cover the same totals, except for a small amount of goods which is entered into customs warehouse and then re-exported. There may, however, be an important difference in the time at which warehoused goods are recorded as imports; some shipments which enter customs warehouses remain there for several months before clearance. A more detailed discussion of this change appears on one of the blue pages included in the January, 1964 issue of this report.

Both in 1964 and in earlier years, import statistics exclude the following commodity movements (some of these are recorded separately as Special Transactions—Non-Trade in Table 5 of this report): gold and gold products where the value of the gold content is 80% or more of the total value (a small amount of gold scrap in the form of jewellers' sweepings is included in class 258-99); current coin; settlers' effects; private donations and gifts; tourists purchases exempt from duty; goods imported by foreign armed forces or diplomats stationed in Canada (or brought back by Canadian armed forces or diplomats returning from postings outside Canada); temporary imports for exhibition or competition (and film imported for exhibition or processing or returned after exhibition or processing abroad); ships of British construction and registry imported for use in Canada, and ships and aircraft purchased for use as international carriers but not used to carry goods between points in Canada; bunker supplies and ships' stores purchased by Canadian vessels or aircraft abroad; generally, all temporary imports and goods merely moving in transit through Canadian territory.

4. **Countries Credited:** Imports are credited to the country from which the goods were first directed to Canada, except for goods of Central or South American origin consigned to Canada from the United States which are credited to the country of origin.
5. **Quantities:** Tables 4 and 5 show quantities in terms of the units specified for each class in the Import Commodity Classification, Vol. I. Where no unit of quantity is specified, the quantity columns are empty.

Units of weight or volume relate to the weight or volume of the goods, and exclude the weight or volume of any packing required for shipment except in certain special cases otherwise defined in the Customs Tariff. Units of number refer to the number of complete (or substantially complete) units imported, excluding parts (for any class where the recorded value includes both complete units and parts of these units, the average value per complete unit can not be calculated). "Ton" means 2,000 pounds avoirdupois. "Cwt." means 100 pounds avoirdupois.

6. **Values:** The value of goods imported is usually the value as determined for customs duty. The Canadian Customs Act generally requires the valuation of goods f.o.b. point of shipment in the country of export, but at least in recent years importers have often reported c.i.f. value for free goods or goods subject to specific rates of duty. An effort is made to ensure that f.o.b. values are consistently used in import statistics in the following cases: goods subject to dumping duty (from January, 1959); raw cotton and crude petroleum (from January, 1962, retroactive to January, 1961); raw sugar (from January, 1963, retroactive to January, 1961); all shipments individually valued at \$100,000 or more (from January, 1964). Only about one-fifth of the value of imports is covered by these specific checks.
7. **Abbreviations:** Many descriptions of countries and commodities used in this report are abbreviated or incomplete because of mechanical limitations. A key to abbreviations of countries appears in this report, and full descriptions of all commodities appear in the Import Commodity Classification, Vol. I. The letters "n.e.s." mean "not elsewhere specified".
8. **Revisions:** All statistics in this report are subject to revision. Revisions to previous reports are published on coloured pages at the beginning of each monthly report.

KEY TO ABBREVIATIONS OF COUNTRIES

Note: The classification of Countries with a statement of the territorial limits used for statistical purposes will be found in the blue pages of the January, 1960 report. Amendments effective in any year are listed in the January report for that year.

Value, Price and Volume Indexes of Imports

The value, price and volume indexes of imports based on the nine main component material groups according to the old Statistical Classification—Imports are still carried in this report and will continue to be published throughout the current year for the convenience of the users of these data.

This report also marks the start of publication of the value, price and volume indexes of imports arranged according to the sections of the new Import Commodity Classification. The declared value indexes have been based on a grouping of 1948 values into appropriate sections of the new classification. The first six sections of this classification are represented in the index, and Section VII "Special Transactions Non-Trade", which does not enter into the import totals, is excluded. The price index has been based on a re-arrangement of the individual price lines used in calculating the old index, retaining, with some small changes, the original 1948 weighting pattern. The volume index is, as usual, derived by dividing the value index by the corresponding price index. No price or volume index can be compiled for Sections VI "Special Transactions—Trade" because of its non-homogeneity. In addition to presenting the January 1964 data, the re-arranged indexes have been also prepared for 1962 and 1963.

It should be noted that as of January, 1964, imports include both goods which are cleared by Customs immediately on arrival in Canada and also goods entered into customs warehouses without being cleared for domestic use. This new concept has also been introduced in the value, price and volume indexes but the effect on the indexes is considered of minor significance.

For an explanation of the new basis of compiling trade statistics, refer to the blue insert in the January, 1964, issue of this report.
